Salters' Chemistry Club Reflection Questions

Reflecting on an activity a while after completing it is a great way to assess what students have learned and what impact the activity had on them. This document is designed as a guide for teachers/technicians to work through with students who are active on Chemistry Club to reflect on their experiences. We recommend these questions are asked at least two weeks after finishing a monthly theme.

Thinking back to previous month's theme(s):

- What did you find was the most interesting topic or idea covered in the theme?
- Have you noticed any topics from this theme come up in your daily life? When?
- How did learning about this theme change your perception of the topic?
- Have you learned anything more about the topic since finishing the month's activities?
- What was your favourite part of the monthly theme? How would you explain this part to a younger student?
- How would you explain the Chemistry Club platform to a friend who is interested in using it?
- Did you find any of the topics or activities more challenging? What helped you overcome this?

If you have any questions about this document, or would like to share feedback that you have received from students during a reflection activity, please contact us using chemistryclub@saltersinstitute.org.
